Patent No. 5747024
GENERAL INFORMATION:
APPLICANT: Grabatein, Kenneth
APPLICANT: Bisenman, June
APPLICANT: Rauch, Charles
ITLE OF INVENTION: Epithelium-derived T-cell Factor
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
            TITLE OF INVENTION: EPITHELIUM-DERIVED T-CELL FACTOR NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESSE: ADDRESSES: Seed and Berry
STREET: 6300 Columbia Center, 701 Fifth Avenue CITY: Seatile
STATE: Washington
COUNTRY: USA
                                                                                                                                                                                        COMPUTER READABLE FORM:

COMPUTER READABLE FORM:

MEDIUM TYPE: FLOPPY disk

COMPUTER: IBM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

APPLICATION NUMBER: US 08/393,305

FILING DATE: 20-FEB-1995

ATTORNEY/AGENT INFORMATION:

NAME: MCMASTERS; David D.

REFERENCE/DOCKET NUMBER: 33,963

REFERENCE/DOCKET NUMBER: 33,963

REFERENCE/OCKET NUMBER: 33,663

REFERENCE/OCKET NUMBER: 306-52,4900

Patent No. 5707616
GENERAL INFORMATION:
APPLICANT: Grabatein, Kenneth
APPLICANT: Eisenman, June
APPLICANT: Eisenman, June
APPLICANT: Escenman, June
TITLE OF INVENTION: EPITHELIUM-DERIVED T-CELL FACTOR
UNDRER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: Seed and Berry
STREET: 6300 Columbia Center, 701 Fifth Avenue
                                                                                                                                                                                                                            COMPUTER READABLE FORM:
MEDIUW TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/393,305
FLING DATE: 22-FEB-1995
CLASSIFICATION: 424
ATTORNEY/AGENT INFORMATION:
NAME: MCMASTERS, David D.
REGISTRATION NUMBER: 33,963
REFERENCE/DOCKET NUMBER: 33,963
TELECHOMONICATION INFORMATION:
TELECHOMONICATION INFORMATION:
TELECHOMONICATION INFORMATION:
TELECHOMORE: 206-622-4900
INFORMATION FOR SEQ ID NO: 13:
SEQUENCE CHARACTERISTICS:
LENGTH: 345 base pairs
TYPE: nucleic acid

Patent No. 5795966

GENERAL INFORMATION:

APPLICANT: Grabstein, Kenneth

APPLICANT: Pettit, Dean

TITLE OF INVENTION:

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

ADDRESSE: Immunex Corporation

STREET: 51 University Street

CITY: Seattle

STATE: Washington

COUNTRY: USA

ZIP: 98101

COMPUTER REAABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OPERATING SYSTEM: Word for Windows 95, 7.0

SOFTWARE: PATENTIND NATA:

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/392,317B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 4.3%; Score 21; DB 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 double-stranded CDNA was size selected, ligated to ECO RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pr7r3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from 4 multiple sclerosis lesions from one patient was kindly provided by Dr. Kevin G. Becker (NINDS/NIH).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /lab_host="DH10B (ampicillin resistant)"
